isabella.o.aston@gmail.com  
Bristol, UK

### SKILLS

I am a recent graduate of Mayden Academy's full-stack, intensive, 16 week course. Here I learnt the fundamentals of programming, and became a Certified Scrum Master. At Mayden Academy, I have worked on 7 projects and I was the scrum master during our first team project. I have listed some of my favourite projects here, or check out my portfolio: <http://isabellaaston.com/>

### EDUCATION

#### Mayden Academy (2020)

Full-Stack Track covering HTML, CSS, PHP, JavaScript, MySQL, MongoDB, Typescript, SASS, MVC & PHP Frameworks, Node.js, React

#### Agilify and Scrum Alliance (2020)

Scrum Master Training

#### University of Bristol (2013-2017)

Studied a year of Maths & Philosophy before switching to straight Philosophy. Due to health reasons I did not complete my degree.

#### Runnymede College (2011-2013)

A-levels: Mathematics (A), Further Mathematics (B), Spanish (A), English Literature (B)

### ABOUT

I am a passionate and enthusiastic full stack developer looking to evolve my skills in a collaborative environment. I am drawn to coding because of its need for creative and logical thinking, as well as the ever-evolving nature of the industry. I love trying new things, which means I love travelling and trying new food and drink, as well as leading me to co-found Bristol's first Quidditch team! My hobbies include cooking and reading, as well as keeping fit with kickboxing.

### PROJECTS

#### JavaScript Game

##### Card Game | <https://bit.ly/2X9IXPA>

We built a card game using JavaScript. The game was a point and click card game in which we used timers and a function to generate a random card. After a specified time, the probability of getting trick cards increased. The game also worked with keypresses.

#### PHP Website

##### Naked Mole Flats | <https://bit.ly/2zbE6p0>

A project built using OOP and SOLID principles. The website was built using the MVC framework. All methods were unit tested where possible. The front-end was built mobile-first, using SASS.

#### Node.js and React App

##### Battle of the Biscuits | <https://bit.ly/39hd0ug>

We built an API in Node.js to interact with MongoDB. This API sent information about different biscuits to our React App, and updated the database with information from React relating to which biscuit was selected. This allowed us to build a leaderboard of favourite biscuits.

### JOB HISTORY

#### OddPrints

Customer Service | October 2019- present

I am working part time in customer service for a small company based in Bristol. I help customers around the world with their orders of speciality sized photographs, by email. I also worked full time for Diligenta, from November 2019-February 2020, helping customers with pension and insurance queries by phone.

#### HolaTECH

Social Media Manager | May 2018-September 2019

In my role at HolaTECH I managed the social media accounts, as well as writing and researching blog posts. Through this position I had the opportunity to attend tech conferences and talks, as well as work alongside the development team, which opened my eyes to software development as a potential career. Previously, I completed an internship with London based start-up Adzuna, in 2017, in which I had the opportunity to learn about UX, alongside my marketing duties.
